**“The Economic Report” Show to Feature
TrigPoint Solutions Inc.**

DEERFIELD BEACH, FLORIDA - May 28, 2009 - The producers of **The Economic Report** are pleased to announce that **TrigPoint Solutions** will be featured in an upcoming episode as part of the *Business and Technology Series: Asset Management Solutions for the 21st Century*.

Few enterprises require so great a capital equipment investment with as much concurrent attention to worker safety as the oil and gas drilling industry. Drilling companies require innovative solutions to ensure large, complex, costly rigs are always in a position and condition to do the job safely, effectively and efficiently.

Colorado-based TrigPoint Solutions has perfected a field asset management and execution system that enables drilling companies to maximize the productivity and performance of field assets and personnel, while reducing operating costs and safety and compliance risks.

The company's proprietary PROMPTT[®] SYSTEM is a modern-day execution tool that incorporates RFID (Radio Frequency Identification) technology, interactive mobile hand-held terminals, satellite communications and a web-based interface to ensure compliance to corporate tracking, preventative maintenance, certification and safety procedures. Reliable, nearly indestructible RFID tags are attached to assets to validate proof-of-presence, direct asset-specific activities and facilitate real-time information such as location, maintenance history and effectiveness of operation. Rugged hand-held terminals built to withstand the rigors of the drilling environment interactively direct field personnel to perform a predetermined set of tracking, maintenance, certification and safety tasks. Information gathered by the system is securely transmitted over the Internet via satellite to a centralized database. Rig activities can be monitored remotely, in real time through any web-accessible device. The system can generate reports or receive alerts based on any number of tracking, maintenance or safety criteria.

PROMPTT[®] is rapidly deployable and is designed to interface with any IT platform or ERP/EAM/CMMS database. The cost of the system can often be defrayed by avoiding just one day of rig downtime or not knowing the location or status of critical assets.

Front-end use of the system through the mobile hand-held terminals reduces errors and omissions by eliminating paperwork and manual data entry. Back-end users can configure the system via the web interface and sort and filter data to help managers evaluate assets and personnel on a number of performance based measures.

“TrigPoint Solutions has emerged as the leader in asset management and execution systems in the oil and gas industry” said Greg Slater, VP of Business Development for TrigPoint Solutions. “Our clients, who are some of the largest in the industry, are looking for maximum visibility, control and efficiency of their field assets and operations. What they value most about PROMPTT[®] is that it’s extremely effective, easy-to-use and delivers significant ROI.”

TrigPoint offers the PROMPTT[®] SYSTEM on an all-inclusive basis including all RFID hardware, application software, implementation, training, support and warranty.
