**FOR IMMEDIATE RELEASE**

## **TrigPoint Selected by Calmena for RFID Enabled Heliportable Rig Component Tracking and Transport Management**

**DENVER, COLORADO – March 30, 2011** – TrigPoint Solutions, Inc. (“TrigPoint”) announced today Calmena Energy Services, Inc. (“Calmena”) will trial TrigPoint’s PROMPTT® System on their heliportable rigs in efforts to automate drill component tracking, transport management and on-going maintenance.

“Calmena recently acquired a major contract to provide heliportable drilling services in Brazil. We started using PROMPTT® by RFID tagging over 400 drill components during the construction phase to uniquely identify and manage critical component details and specifications including make, model, series and weight. We also captured component dependencies and hierarchy along with images of all components. During helicopter moves, the plan is that users can instantly view all component information and configure optimal payloads directly via PROMPTT®’s hand-held terminals, and for cross-border moves components are easily verified and matched against customs documentation,” said Dave Brown, VP Engineering, Calmena Energy Services Inc. “Once the rigs are in position, we will trial PROMPTT® to effectively ensure that operational checks and routine maintenance activities are executed to the highest level of compliance to maximize rig uptime.”

“TrigPoint is proud to be associated with Calmena’s new heliportable drilling services and expansion into Brazil. The benefits of using PROMPTT®’s RFID technology in conjunction with real-time visibility through ruggedized hand-held terminals are quickly realized. Users now have access to comprehensive component information to ensure accurate inventories and efficient rig moves,” said Greg Slater, VP Business Development. “PROMPTT® also instructs users to routinely check various components and record operational data which is then processed to automatically generate pro-active maintenance instructions. PROMPTT® has robust functionality specifically geared towards the oil and gas industry. It is paperless, easy-to-use, ruggedized, multilingual and proven to reduce costs and downtime.”

PROMPTT®, an advanced mobile execution and compliance system delivers immediate return on investment by maximizing asset and workforce performance, productivity and accuracy. It is completely pro-active, automated and paperless. TrigPoint combines Radio Frequency Identification (“RFID”) technology, ruggedized mobile devices, interactive end-user applications, PROMPTT®’s business dynamic back-end and mobile integration to link assets and workforce to any corporate ERP, EAM or CMM systems. PROMPTT® is rapidly deployable, effective and user-friendly. It can ensure compliance with customer business policies, procedures and controls associated with asset tracking, maintenance and certifications and workforce safety, job analysis and time and attendance.

### **Calmena Energy Services, Inc.**

Calmena Energy Services, Inc. is a diversified energy services company that provides well construction services to its customers operating in Canada, the United States, Latin America as well as the Middle East and North Africa.

### **TrigPoint Solutions, Inc.**

TrigPoint Solutions, Inc. is an established leader in mobile execution and compliance systems developed specifically for the oil and gas industry. TrigPoint works with companies to manage the execution and compliance of business processes and controls associated with their mobile assets and workforce and delivers immediate return on investment by maximizing performance, productivity and accuracy.
